How To:
CHECK WHICH PAGES USE A SPECIFIC BLOCK

This feature will be used when you change content on a block and need to republish all of the pages that use this particular block. You can easily find out which pages use the block by checking its relationships.

1. Select the block in the folder directory.

2. In the tab menu at the top, choose “Relationships”.

Note:
If you wish to publish each page at this point, you can choose “Publish all relationships” or you can tick the boxes next to each page you wish to publish, then choose “Publish” from the “Select One” drop down menu.
